Law Enforcement Tactical Trauma Course

Participant Requirement:

Photo ID, gun belt, flashlight, red/blue gun or
duty weapon with ammo safe.

Law Enforcement Tactical Trauma Course (LETTC) involves aggressive medical strategies that go well beyond the basic first responder skills taught to most police officers. **LETTC** is designed to provide officers with medical skill sets required to stabilize a **LIFE THREATENING** injury when definitive medical care is not readily available. Using the proven methods of battlefield expedient care, the principles of the U.S. Military's Tactical Combat Casualty Care (TCCC) are deeply embedded in this course.

OFFICER DOWN incidents will be examined with techniques of **FORCE ON FORCE** and **ACTIVE SHOOTER** utilized to provoke stress inoculation scenarios to combine physical law enforcement tactics with medical intervention skills. **HEAVY USE OF TRAINING MUNITIONS INVOLVED.**

Treatment of **gunshot wounds, explosions, falls** and other immediate life threatening injuries will be covered with focus on **tourniquet use, wound packing, and airway control techniques.**

**LETTC is an intense,
physically active, hands-on
2 Day Course.**
